

Robot Houses - Instructions

1. Create a robot.
2. Have the robot start in the bottom left corner of the window.
3. Draw a house with a flat roof, of height 100 with green grass after it.
4. Use a for loop to draw 10 houses like the one in step 3..
5. Change the code to make the height random (100 - 500). Draw 10 houses of different heights
6. Make each house drawn in a different (random) color.
7. Set the scene to night time by setting the background to black using `Robot.setWindowColor(Color c)`
8. Give the houses peaked roofs if their height is less than 300. Keep a flat roof if the house is more than 300.
